YASH DARSHAN MORE

Backend Java Developer
yashmore0612@gmail.com • https://www.linkedin.com/in/yash-more-aa26b6331 • Pune

Summary

I am a Java Backend Developer with a strong foundation in Java, OOP, JDBC, and MySQL. I enjoy building backend applications and solving real-world problems through code. I built a Banking Application using Java and JDBC. Currently, I am learning Spring Boot and Spring AI to develop scalable backend systems and AI-powered applications. I am looking for opportunities to gain practical experience and grow as a backend developer.

Experience

JPMorgan Chase & — Remote
Software Engineering Virtual Intern — 11/2025 - 12/2025

Company Description

- Completed 5 backend development tasks including project setup, Kafka integration, H2 database configuration, and REST API development.
- Implemented 3+ REST API endpoints and controllers to simulate backend services in a financial system.
- Integrated 1 messaging system (Apache Kafka) and configured 1 in-memory database (H2) for testing and development.
- Gained hands-on experience working with multiple backend technologies in a real-world software engineering simulation.

Skills

Java · JDBC · SQL · MySQL · Object-Oriented Programming · REST API Basics · Data Structures & Algorithms · Git · GitHub · Apache Kafka · Spring Boot · Spring AI

Education

Savitribai Phule Pune University — 09/2024 - 09/2028
Bachelor of Engineering (Information Technology)

Higher Secondary Certificate — 07/2022 - 05/2024
12th Science

Projects

Banking Application — Developed a console-based banking system using Java, JDBC, and MySQL to perform account operations such as account creation, deposit, withdrawal, and balance checking. Implemented database connectivity and efficient data handling for transaction management.

GitHub: https://github.com/YashMore641/JAVA-APPLICATIONS/blob/main/BankingApplication.java

Algorithm Visualizer — Developed an interactive application that visualizes different sorting algorithms. Users can select a sorting algorithm and control the speed to observe how the array gets sorted step-by-step, helping understand algorithm behavior and time efficiency.

Key Achievements

Academic Excellence

Achieved a CGPA of 9.55 in Bachelor of Engineering (Information Technology), demonstrating strong academic performance and consistent dedication to learning.

Software Engineering Virtual Experience

Completed a backend-focused job simulation with JPMorgan Chase & Co. via Forage, working on tasks like REST API integration, Kafka setup, and database configuration.

Cloud Certification

Earned the Oracle Cloud Infrastructure Foundations Associate certification from Oracle, gaining foundational knowledge of cloud computing and infrastructure.
